FSM .NET Marina Management Software

The **FSM .NET Marina Management System** is the most advanced and capable marina management software available. It's reliable, fast, flexible, comprehensive, and quickly understood and mastered. It was developed with Microsoft's groundbreaking .NET software development technology and uses Microsoft's SQL Server database engine. FSM runs on the latest Windows server and workstation software, and on cloud services like AWS and Azure. It is designed for very efficient local and wide-area networking with an unlimited number of simultaneous users.

Though built with the latest technology, FSM inherits the combined wisdom and knowledge of hundreds of marina operators gathered over the past two decades who used its predecessor. Recognized leaders in the marine industry and large marina chain operators have surveyed everything on the market and chosen FSM. There are over 250 marinas nationwide using FSM, and most of them have moved and converted data from other systems with Professional Software's expert assistance.

The **FSM .NET Marina Management System** offers the following modules for wet and dry stack storage marinas, marine repair services and boatyards, ship's stores, and boat dealers. Property management reporting and fully integrated, robust accounting is included.

- Wet Storage Dock Management
- Ruggedized Tablet Dock Check with Meter Readings
- Dry Stack Rack Management
- Interactive Graphical Marina View for Slips, Racks and Land Storage
- Launch Scheduling for Dry Stack, Land Storage, and Service Operations
- Accounts Receivable with AutoBilling, e-Statements and AutoPayments
- Contract Management and Custom Contracts
- Repair Order Management with Inventory Control
- Point-of-Sale with Inventory Control
- Transient Guest Reservations
- Boat Renting with Reservations
- Boat Sales with Contact Management
- Accounts Payable with Secure Checking Bank Interface
- General Ledger
- Integrated PCI Compliant Credit Card Payment Processing with EMV Chip Card Readers
- Access Control System Interface
- Fuel Management System Gas Pump Interface
